

ODBC KIT

ODBC Reporting/Analysis in Excel

The OSAS ODBC Kit opens the door to a world of possibilities. An open database connectivity (ODBC) tool, the ODBC Kit allows you to access centralized OSAS data through Microsoft tools such as Access and Excel as well as hundreds of other popular ODBC-compliant packages. You'll also receive the key OSAS management reports (see back side) for all OSAS applications in an Excel format. You'll be able to produce graphical images (pie charts, bar graphs, pictures and other images) live from your OSAS data.

The ODBC Kit includes several examples for Microsoft Excel, Microsoft Access, and Crystal Reports. In addition, you receive PivotTables in Excel for all OSAS applications running on your system.

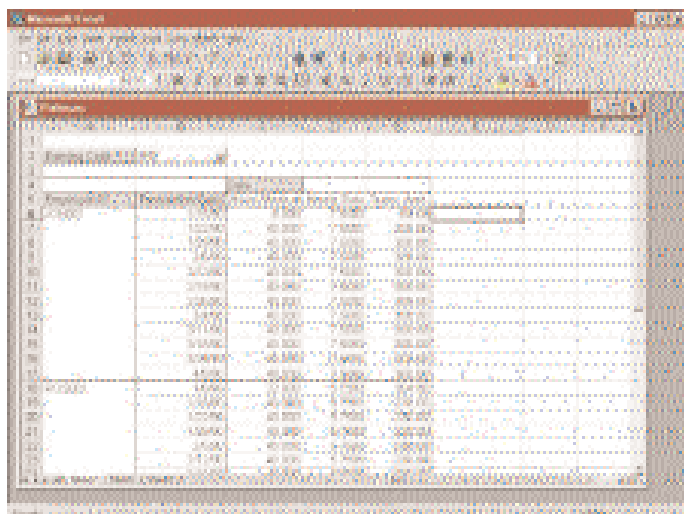

Select an item and view the sales and profit graph in Microsoft Access.

You'll have unlimited access to your OSAS data with the following ODBC-compliant software packages:

- Microsoft Access
- Microsoft Excel
- Microsoft Word
- Lotus 1-2-3
- WordPerfect
- Crystal Reports
- dBase IV
- Foxpro Database
- many more

Report Applets are available with a Microsoft Excel PivotTable for each of the major files in each application. For example, in the Accounts Receivable applet, you will find tables for customers, open invoices, transactions, detail history, summary history, and more. The number of spreadsheets varies by application. You'll be amazed at how easy it is to use these tables; you'll never look at your accounting data the same way again!

This PivotTable displays transaction history from the Payroll Transaction History file. From here you can sort on Employee ID or Transaction Date.

ODBC Kit applet reports included:

Accounts Receivable
 Aging History
 Sales Analysis
 Cash Receipts
 Customer Sales Analysis
 Customer Sales History
 Detail Sales History
 Payment History
 Item History
 Methods of Payment
